Liners for IBC's

Reducing the costs of intermediate storage & distribution

IBC liners can eliminate bottle replacement and also expensive and often inadequate bottle cleansing, waste water charges can also be dramatically reduced. In addition when the liner is removed from the IBC every last drop of product can be discharged which can add up to a sizeable saving.

The liner material can be easily recycled which helps to reduce your company's carbon footprint, this also helps the disposal costs of contaminated IBC bottles.

The use of an IBC liner guarantees that the interior of your IBC will be free from any contamination from previous use or detergent residue left from laundering. The liner film provides a virgin surface for the IBC interior, an important concern were container hygiene is paramount.

Benefits:

- Cost effective
- Quick to install
- Eliminates risk of contamination
- Carbon footprint greatly reduced
- Designs to suit top-fill or bottom-fill systems

Typical products used with IBC liners:

- Paint & Ink
- Adhesives
- Cosmetics
- Chemicals
- Food
